

AVA CORNER/THEATRE & ALVIS

Aire Leather – Grey & Black

- When opening boxes start by turning box upside down and opening from the bottom flaps. If there are any parts such side head rests, these will be under the metal frame. Remove.
- Turn boxes over and lift off. We recommend constructing one box at a time so pieces don't get mixed up. Carry parts into the house limiting lifting excessive weight.
- You can clearly see which part is the seat, the back rest slides onto two metal large pins at the back of the seat. It is best to line them up evenly then lightly push down. Once in place apply a little more pressure evenly from the top of the seat. You will hear it click into place.
- Corner wedge back rest, the zips on the side of the panels should be lined up in the centre of the corner wedge seat.
